Paper Title
Classifying Chest X-Ray COVID-19 images via Transfer Learning

Reviewer #2

Questions

1. Overall Evaluation:
Strong Accept

2. Comments to the Authors:
The authors resolve an important problem which is classifying Chest X=ray Covid-19 images using a deep learning approach. The methodology and datasets used in the paper are explained well and the results are discussed extensively in the paper. The paper should be accepted as is.

Questions

1. Overall Evaluation:
Accept

2. Comments to the Authors:
The authors compare the classification performances of pre-trained CNN architectures for Chest X-Ray COVID-19 classification task. Overall, the comparative analysis is interesting, but, further results on training and validation performances should be provided with an analysis on generalization of the trained networks. Furthermore, the manuscript should be proof-read for the final submission.
